2012 Cuyahoga County Youth Risk Behavior Survey: Methodology

Introduction

The Prevention Research Center for Healthy Neighborhoods (PRCHN) at Case Western Reserve University has administered the Youth Risk Behavior Survey (YRBS) in school districts throughout Cuyahoga County since 2000. The YRBS is a cross-sectional tool developed by the Centers for Disease Control and Prevention (CDC) to track adolescent risk behavior over time. The national YRBS has tracked many of the major causes of morbidity and mortality for adolescents since 1991. Nationwide, the YRBS is conducted every two years among students in grades 9 through 12.

During the spring of 2012, the Prevention Research Center for Healthy Neighborhoods (PRCHN) conducted the YRBS among 7th through 8th grade students in Cuyahoga County middle schools. The survey was tailored to fit local needs and addressed a wide range of topics. The 2012 Cuyahoga County Middle School YRBS included questions from the following areas:

- Alcohol Use
- Behaviors that Contribute to Unintentional Injuries
- Depression and Suicide
- Illegal and Prescription Drug Use
- Nutrition
- Obesity and Weight Control
- Physical Activity
- Positive Youth Development
- Preventive Health Care
- Reproductive Health
- Tobacco Use
- Violence

This brief report presents the detailed methodology undertaken by the PRCHN as well as sample description.

Methodology

The Prevention Research Center for Healthy Neighborhoods (PRCHN) regularly uses a two-stage cluster sample design that mimics the sampling method of the Centers for Disease Control and Prevention (CDC) and its national Youth Risk Behavior Survey (YRBS). For the 2012 Cuyahoga County Middle School (CCHS) YRBS sample, all public schools in Cuyahoga County that contained grades 7 or 8 were included in the sampling frame.

In the first stage of sampling, all 102 middle schools (schools with grades 7 or 8) in Cuyahoga County were selected to participate. In the second stage of sampling, 7th and 8th grade classrooms were selected in each participating school. Classroom selection was random, though schools were given the option to have the survey administered to the entire student body (i.e., every classroom) or a random sample of their students. All students in the selected classrooms were eligible to participate.

Student participation was both anonymous and voluntary. Permission slips were mailed to the homes of selected students; parents or guardians that approved for their student to participate took no action while parents or guardians with questions or who did not wish for their student to participate called their school's main office. Student nonparticipation was due to absence on the day of survey administration, parental refusal, or student refusal. Additionally, a small number of questionnaires failed quality control and were removed from the final data set.

Of the 102 schools selected for participation, 89 agreed to take part. A total of 14,953 students were eligible to complete the survey, and 12,341 usable questionnaires remained after the data set was cleaned and edited for inconsistencies. Missing data were not statistically imputed. The school response rate was 87.2% and the student response rate was 82.5%. The overall response rate was 72.0% (87.2% x 82.5%).

The overall response rate allowed for data to be weighted to the population of 7th and 8th students in Cuyahoga County. Weighting makes the data representative of the population from which it was drawn. A weight was applied to each record to adjust for student non response and the distribution of students by grade, gender, race/ethnicity, and geographic region within Cuyahoga County.

Statistical analyses were conducted on weighted data using SAS statistical software to account for the complex sampling design. Prevalence estimates and 95% confidence intervals were computed for all variables that could be analyzed in a dichotomous fashion. Therefore, data tables presented may not include every survey item on a given topic. Differences between prevalence estimates were considered statistically significant if the 95% confidence intervals did not overlap.

Sample Description

The table below presents a demographic profile of students who completed the 2012 Cuyahoga County Middle School YRBS. A total of 12,341 usable surveys were completed.

| 2012 Cuyahoga County Middle School YRBS | | |
|---|--------|------------|
| | N | Weighted % |
| Total | 12,341 | 100% |
| Gender | | |
| Female | 6166 | 47.4 |
| Male | 6096 | 52.6 |
| Grade Level | | |
| 7 th | 5732 | 49.0 |
| 8 th | 6466 | 51.0 |
| Race | | |
| Black* | 4121 | 40.3 |
| White* | 4773 | 53.9 |
| Hispanic | 1590 | 4.1 |
| Other/Multiple | 1589 | 1.6 |
| Family Affluence | | |
| Low | 2969 | 22.2 |
| Medium | 3820 | 31.2 |
| High | 5358 | 46.6 |
